Comments to Evaluators:

Repository Link – Currently not necessary

UI/UX choices – Some of the choices I made for this interface were the following
Navbar
    Websites – Enables the user to switch between different pages this website has to
    offer. Added the readme as if it was an about page.
    Role/User – Remind the user of their permissions and to make sure they are signed
    in as the right person.
    Sign out – a necessary button for all things that you can sign in
    This was all done using bootstrap as well as the big red box at the top with
    information in it. That is because
    it flows more and is much easier to change.

Body

    Index.html – There is a big welcome at the top to welcome the department head.
    Then each class is split into different sections, with the possibility to view each class
    in both raw and razor views. Then in each section under the table it gives you the
    information (department, Course Number, Description, Semester, and year). Then there
    is a progress bar to show the overall learning outcome completion of the class
    Then you have three options to Delete, Edit, or View the data of the class. This was
    added for the usage of the department head. They should be able to change that sort
    of information. Then you finally have an option to add a new class. This is a big green
    button so it cant be missed.

Course.html — At the start it welcomes you to the class you chose. Then it says your role
(professor) and the options to add or remove learning outcomes. Then inside the
learning outcomes you have the head of the table (Learning Outcomes, Desciption,
Example, Assignment/Exam). Then inside it gives you the order of the learning outcomes,
A small description of the assignment, the examples of students, and finally the
assignment/exam.

Overall the tutorial found at

https://docs.microsoft.com/en-us/aspnet/core/data/ef-mvc/intro?view=aspnetcore-2.2

Was a great help and I used it as an example for most of the project.
